

Deer Velvet is rapidly emerging as one of the most amazing breakthroughs in natural medicine. Known to Asian physicians as a superb health and energy tonic for well over 2000 years.

Velvet Antler has now been scientifically shown to provide the following benefits:

- Improves Immune System Functioning
- Improves Athletic Performance and Strength
- Enhances Sexual Functioning for both Men and Women
- Improves Muscle Recovery after Exercise
- Reduces Negative Effects of Stress
- Promotes Rapid Recovery from Illness
- Has Anti-Cancer & Anti-Inflammatory Properties
- Is a Superior Source of Growth Factors IGF-1, IGF-2 and others

% ABSORBED into the bloodstream - As illustrated in the PDR (Physicians Desk Reference)

Regenesi Deer Antler Velvet is the only Deer Antler in an oral spray liquid form with 33mg of Deer Antler velvet concentrate in each dose, **almost twice as much as found in capsule form and three times that of other sprays.**

Regenesi superior design and expertise in delivery systems has created a synergistic compound that accentuates the properties of Deer Antler Velvet for maximum effect. All of the ingredients of Regenesi Deer Antler Velvet act as catalysts for absorption and assimilation, allowing for ultimate use by the body.

Deer Antler Spray should be taken for 6-8 weeks then set aside for 1 week. It works well for both men and women.

For thousands of years, the Chinese and other Asians have used velvet antler in a variety of ways, ranging from restorative tonics to tumor treatments.

Deer Antler Velvet Spray

FROM REGENESIS

Antler Velvet's health benefits

Deer Antler Velvet has been used in oriental medicine for centuries to increase sexual desire and improve sexual performance. Deer Antler Spray is particularly effective for those low in testosterone or DHEA. Deer Antler contains Leutinizing (luteinizing) hormone which is a precursor to DHEA and testosterone, allowing the body to bring these hormones up to normal levels. Leutinizing hormone controls the length and sequence of the female menstrual cycle and ovarian production of both estrogen and progesterone. In males, it stimulates the testes to produce testosterone and androgen.

Body builders have used Deer Antler Velvet to boost stamina and help maintain muscle health. Deer Antler spray provides the muscle building traits of a steroid without the negative side effects. They also use Deer Antler Velvet as an anabolic agent and to improve recovery time from strenuous exercises. This anabolic effect also accelerates wound healing, making Deer Antler Velvet an ideal supplement to take when recovering from surgical procedures.

Deer Antler Velvet Studies

Although widely accepted in traditional Asian medical communities, Antler Velvet has only recently attracted the attention of the west. Studies showed that Antler Velvet extracts

increased the white blood cells immune stimulating or immune modulating actions. Other laboratory tests show Deer Antler demonstrated pronounced anti-inflammatory activity.

In scientific studies analyzing the medical properties of velvet deer antler, Dr. Peter Fennessy found that antler extracts improved cell growth and also produced anti-tumor and anti-viral effects. Deer Antler Velvet contains the growth factors: IGF-1, IGF-2, TGFb, EPO, NT-3, BMP-4, FGF-8, EGF as well as leutinizing hormone stimulant ICSH.

When we are young, we have a relatively healthy concentration of human growth hormone. In our teenage years, most of us are slim and lean, with low body fat and good musculature. The reason human growth hormone generates lean body mass is its influence on IGF-1. As we age, our growth hormone levels decrease along with IGF-1, which causes muscular atrophy. Velvet deer antler is a natural source of growth factors, which can improve muscular development, organ health, and cell repair.

What is Deer Antler Velvet?

Deer Antler Velvet is named after the soft, velvet-like covering that deer antlers have before they turn bony.

Deer Antler has always held special interest for biologists, especially during the rapid growth in the spring. Deer antler is the only mammalian organ that

regenerates itself each year. At the velvet stage, the antler grows at a tremendous rate, up to 1 cm. a day and is a virtual chemical factory containing:

- Trace amounts of androgens and estrogens
- It is 50% composed of over twenty different amino acids
- Chondroitin A Sulfate, a lubricant found in joints and believed to have anti-inflammatory activity
- Collagen
- Lysophosphatidyl Choline, which may be in part responsible for deer antler's attributed effects on blood pressure
- Gangliosides, which have been associated with increased learning and memory functions
- Various proteins
- The high occurrence of natural minerals and trace elements in deer velvet make it a highly sought after health tonic used for the prevention and healing of a variety of medical conditions in people of all ages.
- High levels of IGF-1 and IGF-2 (growth factors) which are probably responsible for increasing growth in the antler

Regenesis Deer Antler Velvet is a compound that has been shown to improve many areas such as sexual enhancement, increasing strength and muscle tone, improving energy and circulation, strengthening bones and tendons, toning kidneys, increasing the production of growth factors and boosting the immune system.
